## Dumping Waste

Only dump waste into boxes that have a **green** light on. Never dump waste if the light is **red**.

### Follow these steps:

1. Reverse the vehicle until it is 1.5 metres away from the boom. Once the green button flashes, the vehicle has been placed correctly.
2. Open the vehicle doors.
3. Open the boom by pushing the green, flashing button. The button is placed on the column at the entrance to the box.
4. The boom will go up now. Reverse the vehicle all the way back and dump the waste.
5. Once the vehicle is empty, go forward until the boom closes again. You can now clean the vehicle and the unloading site.
6. Throw away all the waste that you sweep up into the waste silo. Do not spend unnecessarily long time on cleaning – you might keep someone else waiting.
7. Finally, drive onto the scales and weigh the vehicle again.

You can now leave the facility. See you soon!
